

CHARGE Anywhere® Releases Secure Card Payment Application for Java 2 Micro Edition (J2ME) Phones

SOUTH PLAINFIELD, NJ (October 10, 2008) – CHARGE Anywhere®, a leading provider of secure Point-of-Sale (POS) solutions and electronic payment services, is pleased to announce the release of its industry leading mobile payment and POS software solution on Java 2 Micro Edition phones. CHARGE Anywhere is adding the Java environment to its growing list of platforms, including Windows Mobile® and BlackBerry OS, so that its PA DSS application will be available to more users across a variety of device types.

The CHARGE Anywhere v2.0.0 software is compatible with most J2ME mobile phones. All phones that merchants wish to use with this application must meet the Java Virtual Machine requirements and support clc1.1 and midp2.0. Currently three phones have been tested and confirmed to be compatible with the new application. They are the Nokia® 6131 and the Motorola® i502 and i602. These manufacturers are among the world's leading mobile phone suppliers, giving merchants a familiar feel to their phones, making it easier to start processing card payments immediately after downloading the software. These phones have been checked and certified as compatible with the CHARGE Anywhere software.

"With the addition of the J2ME platform, CHARGE Anywhere is increasing its list of supported devices, giving merchants more options and the flexibility to decide what solution is best for them," says Paul Sabella, President and CEO of CHARGE Anywhere. "The J2ME platform opens the mobile payment arena to more merchants than before by allowing merchants with everyday mobile phones the option of accepting payments in any location."

The introduction of the CHARGE Anywhere application on phones supporting J2ME gives merchants an even wider range of mobile phones and smartphones to choose from. With CHARGE Anywhere's secure mobile payment software on mobile phones, merchants don't have to buy costly equipment in order to process credit card payments anywhere, anytime. By utilizing existing mobile phones, merchants can start processing transactions in just a few minutes with a simple download directly from the phone.
