

## **CHARGE Anywhere® Enables Secure Hosted Wireless Electronic Signature Capture**

South Plainfield, NJ (September 26, 2008) – CHARGE Anywhere®, a leading provider of secure Point of Sale (POS) solutions and electronic payment services, is pleased to announce the release of signature capture capability with its suite of mobile payment solutions. The release of electronic signature capture marks a significant milestone in CHARGE Anywhere's quest to continuously enrich the feature set of its comprehensive solutions and to solidify its long-standing leadership position as an innovator in mobile payments.

CHARGE Anywhere enabled signature capture on a variety of compatible devices, including VeriFone's NURIT® 8000, the rugged Intermec® CN3, and compatible Windows Mobile® Pocket PCs® such as the Palm® Treo™ and HTC Mogul™. Once a transaction is completed and a signature is placed on the screen of the device, the signature is transmitted wirelessly and stored securely on ComsGate®, the CHARGE Anywhere PCI DSS Level 1 certified payment gateway. The signature is available in real time for retrieval, review, and receipt printing via ComsGate Transaction Manager™. Receipts along with signatures will be stored securely and can be viewed in real-time on ComsGate for six months.

Signature capture with CHARGE Anywhere is simple and intuitive, eliminating the need for a merchant to produce, carry, and store paper receipts. Electronic signature capture simplifies dispute resolution, optimizes operational efficiencies, and reduces costs by leveraging advanced technology and vast infrastructure developed and maintained by CHARGE Anywhere.

Electronic signature capture has been widely available to large retailers; however, until now, comprehensive, cost-effective hosted solutions have been scarce for small and medium merchants (SMB). Nimble, innovative, and responsive, CHARGE Anywhere leveraged its secure end-to-end infrastructure, agility, and industry expertise to enable signature capture for the SMB merchant community.
