

Sprint Professional Developer Program approves CHARGE Anywhere®

SOUTH PLAINFIELD, NJ (September XX, 2008) – CHARGE Anywhere®, a leading provider of secure Point-of-Sale (POS) solutions and electronic payment services, is excited to be a part of Sprint's Professional Developer Program. After a rigorous four week application and approval process, CHARGE Anywhere was accepted into the Sprint Program. The program allows developers the opportunity to certify their software for use on all compatible Sprint phones.

As part of the Professional Developer Program, CHARGE Anywhere has access to restricted API's which are required to develop sophisticated programs. This will soon lead to the certification of the CHARGE Anywhere mobile POS software on the Sprint network and phones. This program is greatly beneficial to independent developers by allowing them access to the technical data behind Sprint's software and network. Included in the program is the ability for CHARGE Anywhere to work with Sprint experts to test the mobile card payment application. By having access to the underpinnings of the software in the phones and network, CHARGE Anywhere will be able to expedite the process of updating and revamping the mobile Point of Sale software to remain a leader in the constantly evolving industry.

"The Sprint Professional Developer Program is an excellent opportunity to expand CHARGE Anywhere's position on top of the mobile Point of Sale industry. Working with Sprint has extensively benefited CHARGE Anywhere and allowed us to continuously develop new and improved features to our Mobile POS software," says Paul Sabella, CEO and President of CHARGE Anywhere.

CHARGE Anywhere's inclusion in this program will be valuable not only to the company but its merchants as well. CHARGE Anywhere will now be able to get the POS software up and running on all new compatible Smartphones before they enter the market, giving merchants the freedom to choose the phone that will best meet their needs.

About Sprint Nextel: Sprint Nextel offers a comprehensive range of wireless and wire line communications services bringing the freedom of mobility to consumers, businesses and government users.
