

CHARGE Anywhere® Releases Mobile Payment Solution Designed For Use With QuickBooks®

The Popular Mobile Payment Solution by CHARGE Anywhere Will Now Include a Feature That Enables Integration with QuickBooks

SOUTH PLAINFIELD, NJ (April 1, 2009) – CHARGE Anywhere®, a leading provider of secure Point-of-Sale (POS) solutions and electronic payment services, is expanding its solutions offerings to mobile merchants. The feature rich CHARGE Anywhere payment application for smartphones can be configured to seamlessly integrate with QuickBooks.

With the improved CHARGE Anywhere mobile payment application, mobile merchants are able to process transactions in the field and have those same transactions created and applied to the correct customers or invoices in QuickBooks with no additional data entry required. When transactions are automatically imported into QuickBooks, all transactions that are marked with an invoice, customer, or clerk number at the time of payment, will automatically be applied to the correct account. This feature will be available on CHARGE Anywhere's Mobile Payment Applications for BlackBerry® OS, Windows Mobile®, and J2ME™

CHARGE Anywhere's mobile payment applications' feature enhancement is just another way to simplify the payments process for merchants. By allowing them to import transactions, the work load is transferred to an easy streamlined process. The process will significantly reduce the amount of time needed to apply payments to invoices and will also reduce the amount of human error. The application will eliminate the need for data entry; the payment record is automatically generated and applied to the correct account. No additional steps are needed after payment processing. With the ability to process transactions anywhere and manage them from their database, it's easier than ever for merchants to conduct business.
