

Charge Anywhere Releases QuickSale for Castles SATURN Android Smart POS Terminals

September 22, 2020 – South Plainfield, NJ – Charge Anywhere and Castles Technology are pleased to announce the release of Charge Anywhere’s QuickSale® software applications with the Castles SATURN series of Android Smart POS terminals.

Charge Anywhere’s STEM Remote Terminal Management system for QuickSale Android Smart Terminals solves the challenges of supporting merchant payment terminals with real-time remote updates. Support your merchants from the convenience and safety of your office.

“Charge Anywhere’s full featured cloud-based QuickSale POS software for Retail, QSR and Restaurants and QuickSale Terminal software can both be deployed on the Castles Smart POS terminals, providing the flexibility needed to support a wide range of merchants”, said Paul Sabella CEO of Charge Anywhere. “With real-time remote updates and customization options to remotely manage acceptance of all major credit cards, PIN debit, EBT, gift cards, taxes, tips, surcharge, convenience, cash discount, custom tender types, and more, QuickSale is a powerful, feature-rich and flexible payment application.”

Castles SATURN line of devices includes the SATURN1000F, an Android Smart POS Terminal with a 5.5” color touchscreen, contact and contactless EMV with PIN on glass and a high speed

2¼” receipt printer. Having the capability to be used as a countertop as well as a mobile device, the SATURN1000F is versatile enough to support merchants of all types, from retail to hospitality, enabling line busting, curb checkout/pickup and pay-at-the-table. An alternative to the SATURN1000F is the compact and highly portable SATURN1000-E, a sleek 5” color touchscreen, contact and contactless EMV tablet. Both devices support Wi-Fi and 4G LTE communications. The larger, SATURN7000 tablet offers these same features in a 7” screen format, well suited for QSR and traditional restaurant businesses, enabling ordering and paying at the table. All these units are supported by innovative communications and charging cradles as well as other accessories such as gang chargers and protective covers.

“Castles is very excited to partner with Charge Anywhere and help bring to market a quality solution that provides great utility and flexibility to Independent Sales Organizations (ISO’s) and merchants of all types” said Winston Fong, Castles North America CEO. Mr. Fong anticipates “an excellent reception and adoption of this innovative solution among ISO’s and merchants”.
