

Charge Anywhere launches Miura Shuttle EMV mPOS and Retail POS Products in the U.S.

Leveraging successful Chip and PIN EMV projects in Latin America, Charge Anywhere is making available a low cost, high value EMV hardware solution for use with contact and contactless EMV cards in retail and mobile environments.

June 29, 2015

South Plainfield, NJ – Charge Anywhere®, an experienced provider of EMV payment application and payment gateway services is announcing the availability of Miura Shuttle POS equipment to merchant services providers and solutions integrators in the US.

Businesses owners and stakeholders wanting to deploy a comprehensive and versatile EMV solution for payment acceptance at the point of sale will be able to leverage Charge Anywhere’s infrastructure, experience and technology to deploy a low cost EMV solution in two configurations; a three in one configuration (Chip, PIN Debit and Magnetic Swipe), and a four in one configuration (Chip, NFC, PIN Debit and Magnetic Swipe).

“Considering the affordability and low price point of these Shuttle EMV POS devices why wouldn’t you deploy EMV payment terminals?” stated Jim Dugan, CFO of Charge Anywhere.

The Charge Anywhere EMV solution is immediately available for implementation through First Data or for any First Data business partner. The Company is expecting to complete the EMV certification process with TSYS and Chase Paymentech later this year.

About Charge Anywhere: CHARGE Anywhere offers a robust selection of financial technology solutions and services, including: Payment Gateway, Mobile Payment Applications, POS Software, End to End Encryption and PIN Data Security services, Closed Loop Card Management and Merchant Billing Services.
